

TP53 (phospho S315) monoclonal antibody, clone 18

Catalog # MAB0660 Size 100 ug

Applications

Western Blot (Cell lysate)

Identification of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) by Western blotting. Using crude cell extracts of MCF-7 untreated (lane 1) and treated with nocodazole 100 ng/ml for 48 h (lane2).

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) on formalin-fixed paraffin-embedded human prostate.

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) on formalin-fixed paraffin-embedded human ovary.

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) on formalin-fixed paraffin-embedded human stomach.

Immunofluorescence

Immunofluorescence staining of p53 phospho-Ser315 in nuclei of HeLa cells subjected DNA damage.

1. HeLa cells were treated with 100 nM Doxorubicin for 24 hr, fixed with 4% paraformaldehyde overnight, permeabilized with 0.25% Triton X-100 in PBS for 10 min. 2. Incubate cells with 1.5% BSA in PBS for 30 min to block unspecific binding of the antibodies. Incubate the cells with 1/1,000 diluted TP53 (phospho S315) monoclonal antibody, clone 18 (Cat # MAB0660) in 1% BSA in PBS at 4°C overnight. Incubate cells with the secondary antibody, goat anti-mouse IgG conjugated with Alex 488, at 1/1,000 dilution in 1% BSA for 1 hr at room temperature. 4. Nucleus (DNA) was stained with DAPI.

Specification

Product Description	Mouse monoclonal antibody raised against synthetic phosphopeptide of TP53.
Immunogen	Synthetic phosphopeptide corresponding to residues surrounding S315 of human TP53.
Host	Mouse
Reactivity	Human
Form	Liquid
Isotype	IgG2b, kappa
Recommend Usage	ELISA Immunofluorescence Immunohistochemistry Western Blot (1:1000-1:2000) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH 7.4 (50% glycerol).
Storage Instruction	Store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	Upon arrival, centrifuge briefly.

Applications

- Western Blot (Cell lysate)

Identification of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) by Western blotting. Using crude cell extracts of MCF-7 untreated (lane 1) and treated with nocodazoleat 100 ng/ml for 48 h (lane2).

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) on formalin-fixed paraffin-embedded human prostate.

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) on formalin-fixed paraffin-embedded human ovary.

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunoperoxidase of TP53 (phospho-S315) monoclonal antibody, clone 18 (Cat # MAB0660) on formalin-fixed paraffin-embedded human stomach.

- Immunofluorescence

Immunofluorescence staining of p53 phospho-Ser315 in nuclei of HeLa cells subjected DNA damage.

1. HeLa cells were treated with 100 nM Doxorubicin for 24 hr, fixed with 4% paraformaldehyde overnight, permeabilized with 0.25% Triton X-100 in PBS for 10 min. 2. Incubate cells with 1.5% BSA in PBS for 30 min to block unspecific binding of the antibodies. Incubate the cells with 1/1,000 diluted TP53 (phospho S315) monoclonal antibody, clone 18 (Cat # MAB0660) in 1% BSA in PBS at 4°C overnight. Incubate cells with the secondary antibody, goat anti-mouse IgG conjugated with Alex 488, at 1/1,000 dilution in 1% BSA for 1 hr at room temperature. 4. Nucleus (DNA) was stained with DAPI.

Gene Ontology [Hyperlink](#)

Gene Summary

This gene encodes tumor protein p53, which responds to diverse cellular stresses to regulate target genes that induce cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. p53 protein is expressed at low level in normal cells and at a high level in a variety of transformed cell lines, where it's believed to contribute to transformation and malignancy. p53 is a DNA-binding protein containing transcription activation, DNA-binding, and oligomerization domains. It is postulated to bind to a p53-binding site and activate expression of downstream genes that inhibit growth and/or invasion, and thus function as a tumor suppressor. Mutants of p53 that frequently occur in a number of different human cancers fail to bind the consensus DNA binding site, and hence cause the loss of tumor suppressor activity. Alterations of this gene occur not only as somatic mutations in human malignancies, but also as germline mutations in some cancer-prone families with Li-Fraumeni syndrome. Multiple p53 variants due to alternative promoters and multiple alternative splicing have been found. These variants encode distinct isoforms, which can regulate p53 transcriptional activity. [provided by RefSeq]
