Gene Description

nitric oxide synthase 2, inducible

Omim ID[145500](#) [163730](#) [248310](#) [611162](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

Nitric oxide is a reactive free radical which acts as a biologic mediator in several processes, including neurotransmission and antimicrobial and antitumoral activities. This gene encodes a nitric oxide synthase which is expressed in liver and is inducible by a combination of lipopolysaccharide and certain cytokines. Three related pseudogenes are located within the Smith-Magenis syndrome region on chromosome 17. [provided by RefSeq]
