Gene Summary	The protein encoded by this gene is a member of the keratin gene family. The keratins are interm ediate filament proteins responsible for the structural integrity of epithelial cells and are subdivide d into cytokeratins and hair keratins. Most of the type I cytokeratins consist of acidic proteins whic h are arranged in pairs of heterotypic keratin chains and are clustered in a region of chromosome 17q12-q21. This keratin has been coexpressed with keratin 14 in a number of epithelial tissues, i ncluding esophagus, tongue, and hair follicles. Mutations in this gene are associated with type 1 p achyonychia congenita, non-epidermolytic palmoplantar keratoderma and unilateral palmoplantar verrucous nevus. [provided by RefSeq
