

JAK1 (phospho Tyr1022/1023) monoclonal antibody, clone F11 (APC)

Catalog # MAB23349

Size 100 Reactions

Applications

Flow Cytometry

Flow cytometric analysis of Jurkat cells with JAK1 monoclonal antibody, clone F11 (APC)(Cat # MAB23349). Untreated as negative control (blue) or untreated (red) or treated with IFN α + IL-4 + pervanadate (green).

Specification

Product Description	Rabbit monoclonal antibody raised against synthetic peptide of human JAK1.
Immunogen	A synthetic phospho-peptide corresponding to residues surrounding Tyr1022/1023 of human phospho-Jak1
Host	Rabbit
Reactivity	Human
Form	Liquid
Conjugation	APC
Recommend Usage	Flow Cytometry (5 μ L/million cells) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (0.09% NaN ₃ , 0.2% BSA)
Storage Instruction	Store at 4°C. Do not freeze.

Note

This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Flow Cytometry

Flow cytometric analysis of Jurkat cells with JAK1 monoclonal antibody, clone F11 (APC)(Cat # MAB23349). Unstained as negative control (blue) or untreated (red) or treated with IFN α + IL-4 + pervanadate (green).

Gene Info — JAK1

Entrez GeneID [3716](#)

Protein Accession# [P23458](#)

Gene Name JAK1

Gene Alias JAK1A, JAK1B, JTK3

Gene Description Janus kinase 1 (a protein tyrosine kinase)

Omim ID [147795](#)

Gene Ontology [Hyperlink](#)

Gene Summary

Janus kinase 1 (JAK1), is a member of a new class of protein-tyrosine kinases (PTK) characterized by the presence of a second phosphotransferase-related domain immediately N-terminal to the PTK domain. The second phosphotransferase domain bears all the hallmarks of a protein kinase, although its structure differs significantly from that of the PTK and threonine/serine kinase family members. JAK1 is a large, widely expressed membrane-associated phosphoprotein. JAK1 is involved in the interferon-alpha/beta and -gamma signal transduction pathways. The reciprocal interdependence between JAK1 and TYK2 activities in the interferon-alpha pathway, and between JAK1 and JAK2 in the interferon-gamma pathway, may reflect a requirement for these kinases in the correct assembly of interferon receptor complexes. These kinases couple cytokine ligand binding to tyrosine phosphorylation of various known signaling proteins and of a unique family of transcription factors termed the signal transducers and activators of transcription, or STATs.
