## Gene Info — ITGAX

<b>Entrez GenelD</b>	<a href="#">3687</a>
<b>Gene Name</b>	ITGAX
<b>Gene Alias</b>	CD11C, SLEB6
<b>Gene Description</b>	integrin, alpha X (complement component 3 receptor 4 subunit)
<b>Omim ID</b>	<a href="#">151510</a>
<b>Gene Ontology</b>	<a href="#">Hyperlink</a>
<b>Gene Summary</b>	This gene encodes the integrin alpha X chain protein. Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain. This protein combines with the beta 2 chain (ITGB2) to form a leukocyte-specific integrin referred to as inactivated-C3b (iC3b) receptor 4 (CR4). The alpha X beta 2 complex seems to overlap the properties of the alpha M beta 2 integrin in the adherence of neutrophils and monocytes to stimulated endothelium cells, and in the phagocytosis of complement coated particles.
