

BCL2L1 monoclonal antibody, clone 7B2.5 (FITC)

Catalog # MAB5859 Size 100 ug

Applications

Flow Cytometry

Murine FL5 cells (FL5-NEO) and FL5 cells transfected with Bcl-xL expression plasmid (FL5-BCL-XL) were fixed with buffered paraformaldehyde and then permeabilized with saponin. The cells were incubated with BCL2L1 monoclonal antibody, clone 7B2.5 followed by phycoerythrin-conjugated goat anti-mouse IgG, and then were analyzed by flow cytometry.

Specification

Product Description Mouse monoclonal antibody raised against recombinant BCL2L1.

Immunogen Recombinant protein corresponding to human BCL2L1.

Host Mouse

Reactivity Human

Specificity human Bcl-xL (Mr 29 KDa).

Form Liquid

Conjugation FITC

Isotype IgG3

Recommend Usage Flow Cytometry (3 ug/10⁶ cells)
The optimal working dilution should be determined by the end user.

Storage Buffer In PBS (0.09% sodium azide)

Storage Instruction

Store in the dark at 4°C. Do not freeze.
Avoid prolonged exposure to light.
Aliquot to avoid repeated freezing and thawing.

Note

This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Immunohistochemistry
- Immunoprecipitation
- Flow Cytometry

Murine FL5 cells (FL5-NEO) and FL5 cells transfected with Bcl-xL expression plasmid (FL5-BCL-XL) were fixed with buffered paraformaldehyde and then permeabilized with saponin. The cells were incubated with BCL2L1 monoclonal antibody, clone 7B2.5 followed by phycoerythrin-conjugated goat anti-mouse IgG, and then were analyzed by flow cytometry.

Gene Summary

The protein encoded by this gene belongs to the BCL-2 protein family. BCL-2 family members form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in a wide variety of cellular activities. The proteins encoded by this gene are located at the outer mitochondrial membrane, and have been shown to regulate outer mitochondrial membrane channel (VDAC) opening. VDAC regulates mitochondrial membrane potential, and thus controls the production of reactive oxygen species and release of cytochrome C by mitochondria, both of which are the potent inducers of cell apoptosis. Two alternatively spliced transcript variants, which encode distinct isoforms, have been reported. The longer isoform acts as an apoptotic inhibitor and the shorter form acts as an apoptotic activator. [provided by RefSeq]
