Hsa-miR-21-5p miRNA Probe (DIG)

Catalog # MI0002 Size

Applications

Chromogenic *In Situ* Hybridization (FFPE Tissue)

(A) microRNA in situ hybridization analysis of Hsa-miR-21-5p miRNA Probe (DIG) showing positive staining on FFPE human testis, liver and breast cancer tissues.
(B) microRNA in situ hybridization analysis of Hsa-miR-21-5p miRNA Probe (DIG) showing negative staining on FFPE human pancreas tissue and the negative controls on FFPE testis, liver and breast cancer tissues in the absence of probe (No Probe) followed by incubation with primary antibody, secondary antibody and detection reagents.

Specification

Product Description	Hsa-miR-21-5p miRNA Probe (DIG) designed from mature human miR-21 sequence.
miRbase ID	MIMAT0000076
Origin	Human
Reactivity	Human
Form	Liquid
Conjugation	Digoxigenin (DIG)
Notice	Use of FFPE miRNA ISH Pretreatment Solution for the pretreatment of formalin-fixed paraffin-embed ded (FFPE) tissue sections is strongly recommended.
Regulation Status	For research use only (RUO)
Supplied Products	10 reactions, 100 uL miRNA probe
Storage Instruction	Store at 4°C.
