Gene Description

insulin-like growth factor 1 (somatomedin C)

Omim ID[147440 608747](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

The protein encoded by this gene is similar to insulin in function and structure and is a member of a family of proteins involved in mediating growth and development. The encoded protein is processed from a precursor, bound by a specific receptor, and secreted. Defects in this gene are a cause of insulin-like growth factor I deficiency. Several transcript variants encoding different isoforms have been found for this gene
