Gene Summary	The protein encoded by this gene is a cytokine produced primarily by monocytes and to a lesser extent by lymphocytes. This cytokine has pleiotropic effects in immunoregulation and inflammation . It down-regulates the expression of Th1 cytokines, MHC class II Ags, and costimulatory molecule s on macrophages. It also enhances B cell survival, proliferation, and antibody production. This cyt okine can block NF-kappa B activity, and is involved in the regulation of the JAK-STAT signaling pathway. Knockout studies in mice suggested the function of this cytokine as an essential immuno regulator in the intestinal tract. [provided by RefSeq
