Gene Name	LTA
Gene Alias	LT, TNFB, TNFSF1
Gene Description	lymphotoxin alpha (TNF superfamily, member 1)
Omim ID	153440
Gene Ontology	Hyperlink
Gene Summary	The encoded protein, a member of the tumor necrosis factor family, is a cytokine produced by lymphocytes. The protein is highly inducible, secreted, and forms heterotrimers with lymphotoxin-beta which anchor lymphotoxin-alpha to the cell surface. This protein also mediates a large variety of inflammatory, immunostimulatory, and antiviral responses, is involved in the formation of secondary lymphoid organs during development and plays a role in apoptosis. Genetic variations in this gene are associated with susceptibility to leprosy type 4 and psoriatic arthritis
