Gene Summary	This gene belongs to the subfamily of small cytokine CC genes. Cytokines are a family of secrete d proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are prote ins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemota ctic activity for dendritic cells, thymocytes, and activated macrophages but is inactive on peripher al blood lymphocytes and neutrophils. The product of this gene binds to chemokine receptor CCR 9. [provided by RefSeq
