😵 Abnova	Product Information
Gene Summary	The membrane-associated protein encoded by this gene is a member of the superfamily of ATP- binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/T AP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MDR/TAP subfamily. Me mbers of the MDR/TAP subfamily are involved in multidrug resistance as well as antigen presenta tion. This gene encodes a half-transporter involved in the transport of heme from the mitochondria to the cytosol. With iron/sulfur cluster precursors as its substrates, this protein may play a role in m etal homeostasis. Mutations in this gene have been implicated in X-linked sideroblastic anemia w ith ataxia.
