Product Information

Gene Summary

This gene encodes a non-receptor tyrosine kinase belonging to the Tec kinase family. The protein contains a PH-like domain, which mediates membrane targeting by binding to phosphatidylinosit of 3,4,5-triphosphate (PIP3), and a SH2 domain that binds to tyrosine-phosphorylated proteins and functions in signal transduction. The protein is implicated in several signal transduction pathway s including the Stat pathway, and regulates differentiation and tumorigenicity of several types of c ancer cells. Multiple alternatively spliced variants, encoding the same protein, have been identified
