

AKT1 (phospho T34) polyclonal antibody

Catalog # PAB7912

Size 100 uL

Applications

Western Blot (Cell lysate)

Western blot analysis of A-431 cells, serum starved overnight (20 ug/lane 1) and calyculin A (100 nM) treated for 30 minutes (20 ug/lane 2). The blot was probed with AKT1 (phospho T34) polyclonal antibody (Cat # PAB7912).

Specification

Product Description	Rabbit polyclonal antibody raised against synthetic phosphopeptide of AKT1.
Immunogen	Synthetic phosphopeptide (conjugated with KLH) corresponding to residues surrounding T34 of human AKT1.
Host	Rabbit
Reactivity	Human, Rabbit, Rat
Specificity	This sequence is highly conserved in rat and mouse Akt.
Form	Liquid
Quality Control Testing	Antibody Reactive Against Synthetic Peptide.
Recommend Usage	ELISA (1:2000) Western Blot (1:500) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (50% glycerol, 1 mg/mL BSA, 0.05% sodium azide)

Storage Instruction

Store at -20°C.
Aliquot to avoid repeated freezing and thawing.

Note

This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Cell lysate)

Western blot analysis of A-431 cells, serum starved overnight (20 ug/lane 1) and calyculin A (100 nM) treated for 30 minutes (20 ug/lane 2). The blot was probed with AKT1 (phospho T34) polyclonal antibody (Cat # PAB7912).

- Enzyme-linked Immunoabsorbent Assay

Gene Info — AKT1

Entrez GeneID[207](#)**Gene Name**

Gene Description

v-akt murine thymoma viral oncogene homolog 1

Omim ID[164730](#) [181500](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

The serine-threonine protein kinase encoded by the AKT1 gene is catalytically inactive in serum-starved primary and immortalized fibroblasts. AKT1 and the related AKT2 are activated by platelet-derived growth factor. The activation is rapid and specific, and it is abrogated by mutations in the pleckstrin homology domain of AKT1. It was shown that the activation occurs through phosphatidylinositol 3-kinase. In the developing nervous system AKT is a critical mediator of growth factor-induced neuronal survival. Survival factors can suppress apoptosis in a transcription-independent manner by activating the serine/threonine kinase AKT1, which then phosphorylates and inactivates components of the apoptotic machinery. Multiple alternatively spliced transcript variants have been found for this gene. [provided by RefSeq]

Other Designations

RAC-alpha serine/threonine-protein kinase|murine thymoma viral (v-akt) oncogene homolog-1|protein kinase B|rac protein kinase alpha
