

RecomAb™

HLA-DPB1 recombinant monoclonal antibody, clone HLA-DPB1/2862R

Catalog # RAB00424 Size 100 ug

Applications

Flow Cytometry

Flow cytometric analysis of human Raji cells using HLA-DPB1 monoclonal antibody, clone HLA-DPB1/2862R.

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human HLA-DPB1.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against non-T, non-B human acute lymphoblastic leukemia REH6 cell line
Reactivity	Human
Form	Liquid
Purification	Protein A/G purification
Isotype	IgG
Recommend Usage	ELISA (1-5 ug/mL for coating) Flow Cytometry (1-2ug/10 ⁶ cells) Immunofluorescence (1-2 ug/mL) The optimal working dilution should be determined by the end user.

Storage Buffer	In 10 mM PBS
Storage Instruction	Store at -20 to -80°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Immunofluorescence
- Enzyme-linked Immunoabsorbent Assay
- Flow Cytometry

Flow cytometric analysis of human Raji cells using HLA-DPB1 monoclonal antibody, clone HLA-DPB1/2862R.

Gene Info — HLA-DPB1

Entrez GeneID	3115
Protein Accession#	P04440
Gene Name	HLA-DPB1
Gene Alias	DPB1, HLA-DP1B
Gene Description	major histocompatibility complex, class II, DP beta 1
Omim ID	142858
Gene Ontology	Hyperlink
Gene Summary	HLA-DPB belongs to the HLA class II beta chain paralogues. This class II molecule is a heterodimer consisting of an alpha (DPA) and a beta chain (DPB), both anchored in the membrane. It plays a central role in the immune system by presenting peptides derived from extracellular proteins. Class II molecules are expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells, macrophages). The beta chain is approximately 26-28 kDa and its gene contains 6 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembrane domain and exon 5 encodes the cytoplasmic tail. Within the DP molecule both the alpha chain and the beta chain contain the polymorphisms specifying the peptide binding specificities, resulting in up to 4 different molecules. [provided by RefSeq]
