RecomAb™

F13A1 recombinant monoclonal antibody, clone F13A1/3772R

Catalog # RAB00547 Size 100 ug

Applications

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining of human placenta.

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against partial human F13A1.
Antibody Species	Rabbit
Immunogen	Recombinant protein corresponding to amino acids 46-181 of human F13A1.
Reactivity	Human
Form	Liquid
Purification	Protein A/G purification
Isotype	IgG
Recommend Usage	Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) (1-2 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In 1 mg/mL PBS
Storage Instruction	Store at -20 to -80°C.

Applications

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

  Immunohistochemical staining of human placenta.

Gene Info — F13A1

Entrez GeneID	2162
Protein Accession#	P00488
Gene Name	F13A1
Gene Alias	F13A
Gene Description	coagulation factor XIII, A1 polypeptide
Omim ID	134570
Gene Ontology	Hyperlink
Gene Summary	This gene encodes the coagulation factor XIII A subunit. Coagulation factor XIII is the last zymogen to become activated in the blood coagulation cascade. Plasma factor XIII is a heterotetramer com posed of 2 A subunits and 2 B subunits. The A subunits have catalytic function, and the B subunits do not have enzymatic activity and may serve as plasma carrier molecules. Platelet factor XIII is c omprised only of 2 A subunits, which are identical to those of plasma origin. Upon cleavage of the activation peptide by thrombin and in the presence of calcium ion, the plasma factor XIII dissociat es its B subunits and yields the same active enzyme, factor XIIIa, as platelet factor XIII. This enzym e acts as a transglutaminase to catalyze the formation of gamma-glutamyl-epsilon-lysine crosslink ing between fibrin molecules, thus stabilizing the fibrin clot. It also crosslinks alpha-2-plasmin inhib itor, or fibronectin, to the alpha chains of fibrin. Factor XIII deficiency is classified into two categori es: type I deficiency, characterized by the lack of both the A and B subunits; and type II deficiency, characterized by the lack of the A subunit alone. These defects can result in a lifelong bleeding ten dency, defective wound healing, and habitual abortion. [provided by RefSeq
Other Designations	FSF, A subunit|TGase|bA525O21.1 (coagulation factor XIII, A1 polypeptide)|coagulation factor XIII A1 subunit|coagulation factor XIII, A polypeptide|factor XIIIa|fibrin stabilizing factor, A subunit|fibrin oligase|protein-glutamine gamma-glutamyltransferase

Pathway

- Complement and coagulation cascades
