Gene Info — VWF

Entrez GeneID	7450
Protein Accession#	P04275
Gene Name	VWF
Gene Alias	F8VWF, VWD
Gene Description	von Willebrand factor
Omim ID	193400
Gene Ontology	Hyperlink
Gene Summary	The glycoprotein encoded by this gene functions as both an antihemophilic factor carrier and a platelet-vessel wall mediator in the blood coagulation system. It is crucial to the hemostasis process. Mutations in this gene or deficiencies in this protein result in von Willebrand's disease. An unprocessed pseudogene has been found on chromosome 22. [provided by RefSeq]
Other Designations	coagulation factor VIII VWF
