Gene Name NHEJ1

Gene Alias FLJ12610, XLF

Gene Description nonhomologous end-joining factor 1

Omim ID [611290](#)

Gene Ontology [Hyperlink](#)

Gene Summary Double-strand breaks in DNA result from genotoxic stresses and are among the most damaging of DNA lesions. This gene encodes a DNA repair factor essential for the nonhomologous end-joining pathway, which preferentially mediates repair of double-stranded breaks. Mutations in this gene cause different kinds of severe combined immunodeficiency disorders. [provided by RefSeq]

Other Designations Cernunnos|XRCC4-like factor
