Gene Name	HSPD1
Gene Alias	CPN60, GROEL, HLD4, HSP60, HSP65, HuCHA60, SPG13
Gene Description	heat shock 60kDa protein 1 (chaperonin)
Omim ID	118190 605280
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the chaperonin family. The encoded mitochondrial protein may f unction as a signaling molecule in the innate immune system. This protein is essential for the foldi ng and assembly of newly imported proteins in the mitochondria. This gene is adjacent to a relate d family member and the region between the 2 genes functions as a bidirectional promoter. Two pseudogenes, both located on chromosome 8, have been associated with this gene. Two transcri pt variants encoding the same protein have been identified for this gene. Mutations associated wi th this gene cause autosomal recessive spastic paraplegia 13. [provided by RefSeq
