RecomAb™

GSTM1 recombinant monoclonal antibody, clone R03-8G2

Catalog # RAB02247 Size 100 uL

Applications

Western Blot

Western Blot analysis of Lane 1: Jurkat, Lane 2: CHO-K1 and Lane 3: Hela lysates with GSTM1 recombinant monoclonal antibody, clone R03-8G2 (Cat # RAB02247).

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human GSTM1.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against a synthetic peptide corresponding to human GSTM1.
Theoretical MW (kDa)	Calculated MW: 26 kD
Reactivity	Hamster, Human
Form	Liquid
Preparation Method	Mammalian cell (CHO) expression system
Purification	Affinity purification
Isotype	IgG
Recommend Usage	Western Blot (1:500-1:1000) The optimal working dilution should be determined by the end user.
Storage Buffer	In 50 mM Tris-Glycine pH 7.4 (0.15 M NaCl, 40% Glycerol, 0.01% Sodium azide and 0.05% BSA).

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Storage Instruction	Store at -20 °C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

- Western Blot

  Western Blot analysis of Lane 1: Jurkat, Lane 2: CHO-K1 and Lane 3: Hela lysates with GSTM1 recombinant monoclonal antibody, clone R03-8G2 (Cat # RAB02247).

Gene Info — GSTM1

Entrez GeneID	2944
Protein Accession#	P09488
Gene Name	GSTM1
Gene Alias	GST1, GSTM1-1, GSTM1a-1a, GSTM1b-1b, GTH4, GTM1, H-B, MGC26563, MU, MU-1
Gene Description	glutathione S-transferase mu 1
Omim ID	138350
Gene Ontology	Hyperlink
Gene Summary	Cytosolic and membrane-bound forms of glutathione S-transferase are encoded by two distinct s upergene families. At present, eight distinct classes of the soluble cytoplasmic mammalian glutath ione S-transferases have been identified: alpha, kappa, mu, omega, pi, sigma, theta and zeta. Thi s gene encodes a glutathione S-transferase that belongs to the mu class. The mu class of enzyme s functions in the detoxification of electrophilic compounds, including carcinogens, therapeutic dru gs, environmental toxins and products of oxidative stress, by conjugation with glutathione. The gen es encoding the mu class of enzymes are organized in a gene cluster on chromosome 1p13.3 an d are known to be highly polymorphic. These genetic variations can change an individual's suscep tibility to carcinogens and toxins as well as affect the toxicity and efficacy of certain drugs. Null mut ations of this class mu gene have been linked with an increase in a number of cancers, likely due t o an increased susceptibility to environmental toxins and carcinogens. Multiple protein isoforms a re encoded by transcript variants of this gene. [provided by RefSeq
Other Designations	GST class-mu 1|HB subunit 4|OTTHUMP00000013346|OTTHUMP00000013347|S-(hydroxyalkyl) glutathione lyase|glutathione S-alkyltransferase|glutathione S-aralkyltransferase|glutathione S-aryltransferase|glutathione S-transferase M1
