

RecomAb™

NOTCH 2 recombinant monoclonal antibody, clone B6

Catalog # RAB03725 Size 200 ug

Applications

Immunofluorescence

Immunofluorescence analysis of NOTCH2 (green) in HeLa cell lysates using anti-Notch 2 recombinant monoclonal antibody, clone B6 (Cat # RAB02798), and DAPI(blue).

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against NRR of mouse Notch 2.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against recombinant protein corresponding to NRR of mouse Notch 2
Reactivity	Mouse
Form	Liquid
Conjugation	Unconjugated
Concentration	batch dependent
Isotype	IgG kappa
Recommend Usage	Blocking ELISA Immunofluorescence The optimal working dilution should be determined by the end user.

Storage Buffer

In PBS with 0.02% Proclin 300

Storage Instruction

Store at 4°C for up to 3 months. For longer storage, aliquot and store at -20°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Immunofluorescence

Immunofluorescence analysis of NOTCH2 (green) in HeLa cell lysates using anti-Notch 2 recombinant monoclonal antibody, clone B6 (Cat # RAB02798), and DAPI(blue).

- Enzyme-linked Immunoabsorbent Assay

- Blocking

Gene Summary

This gene encodes a member of the Notch family. Members of this Type 1 transmembrane protein family share structural characteristics including an extracellular domain consisting of multiple epidermal growth factor-like (EGF) repeats, and an intracellular domain consisting of multiple, different domain types. Notch family members play a role in a variety of developmental processes by controlling cell fate decisions. The Notch signaling network is an evolutionarily conserved intercellular signaling pathway which regulates interactions between physically adjacent cells. In Drosophila, notch interaction with its cell-bound ligands (delta, serrate) establishes an intercellular signaling pathway that plays a key role in development. Homologues of the notch-ligands have also been identified in human, but precise interactions between these ligands and the human notch homologue s remain to be determined. This protein is cleaved in the trans-Golgi network, and presented on the cell surface as a heterodimer. This protein functions as a receptor for membrane bound ligands, and may play a role in vascular, renal and hepatic development. [provided by RefSeq]
