

RecomAb™

# AKT1 (phospho T450) recombinant monoclonal antibody, clone 2A4

Catalog # RAB04270      Size 100 uL

## Applications

### Western Blot

Western blot analysis of Hela whole cell lysate with AKT1 (phospho T450) recombinant monoclonal antibody, clone 2A4 (Cat # RAB04270).

## Specification

|                             |                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Product Description</b>  | Rabbit recombinant monoclonal antibody raised against human AKT1.                                                        |
| <b>Antibody Species</b>     | Rabbit                                                                                                                   |
| <b>Immunogen</b>            | Original antibody is raised against a synthetic phosphopeptide corresponding to residues surrounding T450 of human AKT1. |
| <b>Theoretical MW (kDa)</b> | Calculated MW: 60 kD                                                                                                     |
| <b>Reactivity</b>           | Human                                                                                                                    |
| <b>Form</b>                 | Liquid                                                                                                                   |
| <b>Purification</b>         | Affinity chromatography                                                                                                  |
| <b>Isotype</b>              | IgG                                                                                                                      |
| <b>Recommend Usage</b>      | ELISA<br>Western Blot (1:500-1:5000)<br>The optimal working dilution should be determined by the end user.               |

|                     |                                                                                                                        |
|---------------------|------------------------------------------------------------------------------------------------------------------------|
| Storage Buffer      | In PBS, pH7.4 (150mM NaCl, 50% glycerol and 0.02% sodium azide)                                                        |
| Storage Instruction | Store at -20 °C or -80 °C.<br>Aliquot to avoid repeated freezing and thawing.                                          |
| Note                | This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only. |

## Applications

- Western Blot

Western blot analysis of Hela whole cell lysate with AKT1 (phospho T450) recombinant monoclonal antibody, clone 2A4 (Cat # RAB04270).

- Enzyme-linked Immunoabsorbent Assay

|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gene Summary | The serine-threonine protein kinase encoded by the AKT1 gene is catalytically inactive in serum-starved primary and immortalized fibroblasts. AKT1 and the related AKT2 are activated by platelet-derived growth factor. The activation is rapid and specific, and it is abrogated by mutations in the pleckstrin homology domain of AKT1. It was shown that the activation occurs through phosphatidylinositol 3-kinase. In the developing nervous system AKT is a critical mediator of growth factor-induced neuronal survival. Survival factors can suppress apoptosis in a transcription-independent manner by activating the serine/threonine kinase AKT1, which then phosphorylates and inactivates components of the apoptotic machinery. Multiple alternatively spliced transcript variants have been found for this gene. [provided by RefSeq] |
