RecomAb™

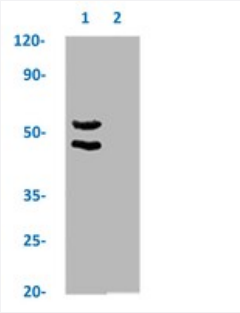

MAPK8/MAPK9/MAPK10 (phospho T183/T183/T221) recombinant monoclonal antibody, clone 1A9

Catalog # RAB04293 Size 100 uL

Applications

Immunocytochemistry

Immunocytochemical staining of HeLa cells with MAPK8/MAPK9/MAPK10 (phospho T183/T183/T221) recombinant monoclonal antibody, clone 1A9 (Cat # RAB04293) (diluated at 1:75).

Western Blot

Western blot analysis of Lane 1:293 whole cell lysate (treated with EGF 100ng/ml/20mins), Lane 2: 293 whole cell lysate (not treated) with MAPK8/MAPK9/MAPK10 (phospho T183/T183/T221) recombinant monoclonal antibody, clone 1A9 (Cat # RAB04293).

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human MAPK8/MAPK9/MAPK10.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against a synthetic phosphopeptide corresponding to residues surroundin g T183/T183/T221 of human MAPK8/MAPK9/MAPK10.
Theoretical MW (kDa)	Calculated MW: 46,54
Reactivity	Human

Form	Liquid
Preparation Method	Mammalian cell (HEK293) expression system
Purification	Affinity chromatography
Isotype	IgG
Recommend Usage	ELISA Immunocytochemistry Immunohistochemistry(1:50-1:200) Western Blot(1:500-1:5000) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, 150 mM NaCl, pH 7.4 (50% glycerol, 0.02% sodium azide)
Storage Instruction	Store at -20 °C or -80 °C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

- Immunohistochemistry
- Immunocytochemistry

  Immunocytochemical staining of HeLa cells with MAPK8/MAPK9/MAPK10 (phospho T183/T183/T221) recombinant monoclonal antibody, clone 1A9 (Cat # RAB04293) (diluated at 1:75).
- Enzyme-linked Immunoabsorbent Assay
- Western Blot

  Western blot analysis of Lane 1:293 whole cell lysate (treated with EGF 100ng/ml/20mins), Lane 2: 293 whole cell lysate (not treated) with MAPK8/MAPK9/MAPK10 (phospho T183/T183/T221) recombinant monoclonal antibody, clone 1A9 (Cat # RAB04293).

Gene Info — MAPK8

Entrez GeneID	5599
Protein Accession#	P45983;P45984;P53779
Gene Name	MAPK8

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Gene Alias	JNK, JNK1, JNK1A2, JNK21B1/2, PRKM8, SAPK1
Gene Description	mitogen-activated protein kinase 8
Omim ID	601158
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the MAP kinase family. MAP kinases act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular pro cesses such as proliferation, differentiation, transcription regulation and development. This kinase is activated by various cell stimuli, and targets specific transcription factors, and thus mediates im mediate-early gene expression in response to cell stimuli. The activation of this kinase by tumor-n ecrosis factor alpha (TNF-alpha) is found to be required for TNF-alpha induced apoptosis. This ki nase is also involved in UV radiation induced apoptosis, which is thought to be related to cytochro m c-mediated cell death pathway. Studies of the mouse counterpart of this gene suggested that th is kinase play a key role in T cell proliferation, apoptosis and differentiation. Four alternatively spli ced transcript variants encoding distinct isoforms have been reported. [provided by RefSeq

Gene Info — MAPK9

Entrez GeneID	5601
Protein Accession#	P45983;P45984;P53779
Gene Name	MAPK9
Gene Alias	JNK-55, JNK2, JNK2A, JNK2ALPHA, JNK2B, JNK2BETA, PRKM9, SAPK, p54a, p54aSAPK
Gene Description	mitogen-activated protein kinase 9
Omim ID	602896
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the MAP kinase family. MAP kinases act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular pro cesses such as proliferation, differentiation, transcription regulation and development. This kinase targets specific transcription factors, and thus mediates immediate-early gene expression in resp onse to various cell stimuli. It is most closely related to MAPK8, both of which are involved in UV r adiation induced apoptosis, thought to be related to the cytochrome c-mediated cell death pathwa y. This gene and MAPK8 are also known as c-Jun N-terminal kinases. This kinase blocks the ubiq uitination of tumor suppressor p53, and thus it increases the stability of p53 in nonstressed cells. Studies of this gene's mouse counterpart suggest a key role in T-cell differentiation. Several altern atively spliced transcript variants encoding distinct isoforms have been reported. [provided by Ref Seq

Gene Info — MAPK10

Entrez GeneID	5602
Protein Accession#	P45983;P45984;P53779
Gene Name	MAPK10
Gene Alias	FLJ12099, FLJ33785, JNK3, JNK3A, MGC50974, PRKM10, p493F12, p54bSAPK
Gene Description	mitogen-activated protein kinase 10
Omim ID	602897 606369
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the MAP kinase family. MAP kinases act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular processes such as proliferation, differentiation, transcription regulation and development. This protein is a neuronal-specific form of c-Jun N-terminal kinases (JNKs). Through its phosphorylation and nuclear localization, this kinase plays regulatory roles in the signaling pathways during neuronal apoptosis. Beta-arrestin 2, a receptor-regulated MAP kinase scaffold protein, is found to interact with, and stimulate the phosphorylation of this kinase by MAP kinase kinase 4 (MKK4). Cyclin-dependent kianse 5 can phosphorylate, and inhibit the activity of this kinase, which may be important in preventing neuronal apoptosis. Four alternatively spliced transcript variants encoding distinct isoforms have been reported. [provided by RefSeq
