Gene Info — MAP2K1

Entrez GeneID	5604
Protein Accession#	Q02750
Gene Name	MAP2K1
Gene Alias	MAPKK1, MEK1, MKK1, PRKMK1
Gene Description	mitogen-activated protein kinase kinase 1
Omim ID	176872
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the dual specificity protein kinase family, which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellu lar signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. T his protein kinase lies upstream of MAP kinases and stimulates the enzymatic activity of MAP kin ases upon wide variety of extra- and intracellular signals. As an essential component of MAP kina se signal transduction pathway, this kinase is involved in many cellular processes such as prolifer ation, differentiation, transcription regulation and development.
