Gene Summary	Mutations in this gene are associated with Nijmegen breakage syndrome, an autosomal recessiv e chromosomal instability syndrome characterized by microcephaly, growth retardation, immunod eficiency, and cancer predisposition. The encoded protein is a member of the MRE11/RAD50 do uble-strand break repair complex which consists of 5 proteins. This gene product is thought to be involved in DNA double-strand break repair and DNA damage-induced checkpoint activation. [pr ovided by RefSeq
Other Designations	Nijmegen breakage syndrome 1 (nibrin)|cell cycle regulatory protein p95|p95 protein of the MRE1 1/RAD50 complex
