RecomAb™

ERBB2 recombinant monoclonal antibody (Pertuzumab)

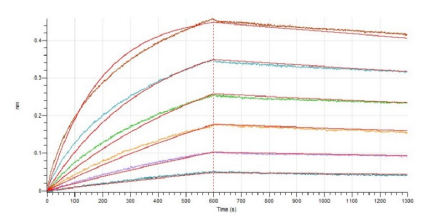

Catalog # RAB09692 Size 50 ug

Applications

Enzyme-linked Immunoabsorbent Assay

Immobilized Human ERBB2-His at 2 ug/mL (100 uL/well) can bind ERBB2 recombinant monoclonal antibody (Cat# RAB09692). The ED_{50} of ERBB2 recombinant monoclonal antibody (Cat# RAB09692) is 89.54 ng/mL .

Bio-layer interferometry

Loaded ERBB2 recombinant monoclonal antibody (Cat# RAB09692) on Protein A Biosensor, can bind Human ERBB2-His with an affinity constant of 1.36 nM as determined in BLI assay.

Greater than 95% as determined by reducing SDS-PAGE.

Specification

Product Description	Recombinant human monoclonal antibody (Pertuzumab) raised against human ERBB2.

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Host	Human
Theoretical MW (kDa)	49.2, 23.5
Form	Liquid
Preparation Method	Mammalian expression system
Purity	Greater than 95% as determined by reducing SDS-PAGE.
Endotoxin Level	< 0.001 EU/ug as determined by LAL test.
Isotype	Human IgG1
Regulatory Status	For research use only (RUO)
Recommend Usage	ELISA BLI assay The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH7.4 (0.2 um filtered solution).
Storage Instruction	Store at -20°C. Avoid multiple freeze-thaw cycles.

Applications

- Enzyme-linked Immunoabsorbent Assay

  Immobilized Human ERBB2-His at 2 ug/mL (100 uL/well) can bind ERBB2 recombinant monoclonal antibody (Cat# RAB09692). The ED_{50} of ERBB2 recombinant monoclonal antibody (Cat# RAB09692) is 89.54 ng/mL .

- Bio-layer interferometry

  Loaded ERBB2 recombinant monoclonal antibody (Cat# RAB09692) on Protein A Biosensor, can bind Human ERBB2-His with an affinity constant of 1.36 nM as determined in BLI assay.

Gene Info — ERBB2

Entrez GeneID	2064
Protein Accession#	P04626
Gene Name	ERBB2
Gene Alias	CD340, HER-2, HER-2/neu, HER2, NEU, NGL, TKR1

Gene Description	v-erb-b2 erythroblastic leukemia viral oncogene homolog 2, neuro/glioblastoma derived oncogene homolog (avian)
Omim ID	137215 137800 164870 211980
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, Ile654/Ile655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq
Other Designations	c-erb B2/neu protein|erbB-2|herstatin|neuroblastoma/glioblastoma derived oncogene homolog|v-erb-b2 avian erythroblastic leukemia viral oncogene homolog 2 (neuro/glioblastoma derived oncogene homolog)
