mutaFISH™ EGFR T790M T790wt RNA Probes

Catalog # FP0001 Size 1 Probe Set

Applications

mutation specific, Fluorescence *In Situ* Hybridization (Cells)

mutaFISH™ staining was performed *in situ* in human H1975 cells captured by CytoQuest™ CR. EGFR T790M point mutation was detected via orange signal (Cy3), and EGFR T790wt was detected via red signal (Cy5).

Gene Summary	The protein encoded by this gene is a transmembrane glycoprotein that is a member of the protei n kinase superfamily. This protein is a receptor for members of the epidermal growth factor family. EGFR is a cell surface protein that binds to epidermal growth factor. Binding of the protein to a lig and induces receptor dimerization and tyrosine autophosphorylation and leads to cell proliferation . Mutations in this gene are associated with lung cancer.
