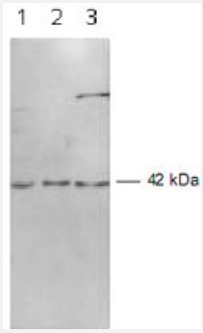

MAPK1 polyclonal antibody

Catalog # PAB9958 Size 100 uL

Applications

Western Blot (Cell lysate)

Western blot using MAPK1 polyclonal antibody (Cat # PAB9958) shows detection of MAPK1 in several whole cell lysates : HeLa (lane 1), A-431 (lane 2), and NIH/3T3 (lane 3).
Detection occurs using a 1 : 1,000 dilution of the primary antibody followed by 1 : 4,000 dilution of HRP Goat-a-Rabbit with visualization via ECL.
Film exposure was approximately 1'.

Specification

Product Description	Rabbit polyclonal antibody raised against partial recombinant MAPK1.
Immunogen	Recombinant GST fusion protein corresponding to C-terminus of human MAPK1.
Host	Rabbit
Reactivity	Human, Mouse, Rat
Form	Liquid
Quality Control Testing	Antibody Reactive Against Recombinant Protein.
Recommend Usage	ELISA (1:2000-1:10000) Western Blot (1:1000-1:2000) Immunoprecipitation (5.0 ug/mg) The optimal working dilution should be determined by the end user.
Storage Buffer	In 20 mM KH_2PO_4, 150 mM NaCl, pH 7.2 (0.01% sodium azide)
Storage Instruction	Store at 4°C. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.

Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

- Enzyme-linked Immunoabsorbent Assay
- Immunoprecipitation
- Western Blot (Cell lysate)

  Western blot using MAPK1 polyclonal antibody (Cat # PAB9958) shows detection of MAPK1 in several whole cell lysates : HeLa (lane 1), A-431 (lane 2), and NIH/3T3 (lane 3).
  Detection occurs using a 1 : 1,000 dilution of the primary antibody followed by 1 : 4,000 dilution of HRP Goat-a-Rabbit with visualization via ECL.
  Film exposure was approximately 1'.

Gene Info — MAPK1

Entrez GeneID	5594
Protein Accession#	P28482;NP_002736
Gene Name	MAPK1
Gene Alias	ERK, ERK2, ERT1, MAPK2, P42MAPK, PRKM1, PRKM2, p38, p40, p41, p41mapk
Gene Description	mitogen-activated protein kinase 1
Omim ID	176948
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the MAP kinase family. MAP kinases, also kno wn as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple bioche mical signals, and are involved in a wide variety of cellular processes such as proliferation, differe ntiation, transcription regulation and development. The activation of this kinase requires its phosp horylation by upstream kinases. Upon activation, this kinase translocates to the nucleus of the sti mulated cells, where it phosphorylates nuclear targets. Two alternatively spliced transcript variants encoding the same protein, but differing in the UTRs, have been reported for this gene. [provided by RefSeq
Other Designations	OTTHUMP00000174492|extracellular signal-regulated kinase 2|extracellular signal-regulated kin ase-2|mitogen-activated protein kinase 2|protein tyrosine kinase ERK2
