CytoQuest™ Glioblastoma Multiforme CSV CSV CD45 GFAP Antibody Kit

Catalog # KA4905 Size 1 Kit

Applications

Immunofluorescence (Circulating Glioblastoma Multiforme Cell)

Representative images of CTC (white arrow) from GBM patient. CTC was detected by using immunofluorescence staining for CSV (FITC, green), GFAP (APC, red), CD45 (PE, orange) and Nucleus (Hoechst, blue).

Specification

Product Description	CytoQuest™ Glioblastoma Multiforme CSV CSV CD45 GFAP Antibody Kit contains antibodies and reagents for immobilization and immunostaining of circulating glioblastoma multiforme cells.
Instrument Requirement	CytoQuest™ CR
Chip Requirement	CytoChipNano CR

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Supplied Products	Kit content: 1. Anti-CSV capturing antibody (Biotin): Biotin conjugated Anti-CSV antibody for circulating glioblastoma multiforme cell capturing. 2. Anti-CSV detecting antibody (FITC): FITC conjugated Anti-CSV antibody for circulating glioblastoma multiforme cell detection. 3. Anti-CD45 detecting antibody (PE): PE conjugated Anti-CD45 antibody for circulating glioblastoma multiforme cell detection. 4. Anti-GFAP detecting antibody: Anti-GFAP detecting antibody for circulating glioblastoma multiforme cell detection. 5. Secondary antibody (APC) 6. 50X Antibody Dilution Buffer (50X ADB). *Reagents are sufficient for 20 assays using recommended protocol.
Regulatory Status	For research use only (RUO)
Storage Instruction	Store Anti-CSV capturing antibody (Biotin), Anti-CSV detecting antibody (FITC), Anti-CD45 detecting antibody (PE) and Secondary Antibody (APC) at 4°C. Store Anti-GFAP detecting antibody and 50X Antibody Dilution Buffer (50X ADB) at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	Cell-Surface Vimentin (CSV) detecting antibody is best used before cell fixation and permeabilization. If fixation is required, please use Abnova's Special Fixative. Cell-Surface Vimentin (CSV) antibody is a pending MD Anderson patent which has been exclusively licensed to Abnova Corporation.

Applications

- Immunofluorescence (Circulating Glioblastoma Multiforme Cell)

  Representative images of CTC (white arrow) from GBM patient. CTC was detected by using immunofluorescence staining for CSV (FITC, green), GFAP (APC, red), CD45 (PE, orange) and Nucleus (Hoechst, blue).
