RecomAb™ Sm Size

TP53 (phospho S9) recombinant monoclonal antibody, clone 2E1

Catalog # RAB08153 Size 50 uL

Applications

Immunofluorescence

Immunofluorescent staining of MCF-7 cells with TP53 (phospho S9) recombinant monoclonal antibody (diluated at 1:100). The secondary antibody was Alexa Fluor 488-congugated goat anti-rabbit IgG (green). Counter-stain DAPI was used (blue).

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against human TP53.
Antibody Species	Rabbit
Immunogen	Original antibody is raised against a synthetic phosphopeptide corresponding to residues surroundin g S9 of human TP53.
Reactivity	Human
Form	Liquid
Preparation Method	Mammalian cell (HEK293) expression system
Purification	Affinity chromatography
Isotype	IgG
Recommend Usage	ELISA Immunofluorescence (1:20-1:200) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, 150 mM NaCl, pH 7.4 (50% glycerol, 0.02% sodium azide)

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Storage Instruction	Store at -20 °C or -80 °C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

- Immunofluorescence

  Immunofluorescent staining of MCF-7 cells with TP53 (phospho S9) recombinant monoclonal antibody (diluated at 1:100). The secondary antibody was Alexa Fluor 488-congugated goat anti-rabbit IgG (green). Counter-stain DAPI was used (blue).

- Enzyme-linked Immunoabsorbent Assay

Gene Info — TP53

Entrez GeneID	7157
Protein Accession#	P04637
Gene Name	TP53
Gene Alias	FLJ92943, LFS1, TRP53, p53
Gene Description	tumor protein p53
Omim ID	114480 114500 114550 151623 161550 191170 202300 260350
Gene Ontology	Hyperlink
Gene Summary	This gene encodes tumor protein p53, which responds to diverse cellular stresses to regulate targ et genes that induce cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metaboli sm. p53 protein is expressed at low level in normal cells and at a high level in a variety of transfor med cell lines, where it's believed to contribute to transformation and malignancy. p53 is a DNA-b inding protein containing transcription activation, DNA-binding, and oligomerization domains. It is postulated to bind to a p53-binding site and activate expression of downstream genes that inhibit growth and/or invasion, and thus function as a tumor suppressor. Mutants of p53 that frequently oc cur in a number of different human cancers fail to bind the consensus DNA binding site, and henc e cause the loss of tumor suppressor activity. Alterations of this gene occur not only as somatic m utations in human malignancies, but also as germline mutations in some cancer-prone families wit h Li-Fraumeni syndrome. Multiple p53 variants due to alternative promoters and multiple alternativ e splicing have been found. These variants encode distinct isoforms, which can regulate p53 tran scriptional activity. [provided by RefSeq
Other Designations	p53 antigen|p53 transformation suppressor|p53 tumor suppressor|phosphoprotein p53|transform ation-related protein 53
