Gene Name ABR

Gene Alias FLJ45954, MDB

Gene Description active BCR-related gene

Omim ID [155255 600365](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a protein that is similar to the protein encoded by the breakpoint cluster region gene located on chromosome 22. The protein encoded by this gene contains a GTPase-activating protein domain, a domain found in members of the Rho family of GTP-binding proteins. Functional studies in mice determined that this protein plays a role in vestibular morphogenesis, suggesting that Rho-related GTPases help coordinate motor skills and balance. Alternatively spliced transcript variants that encode different isoforms have been reported for this gene. [provided by RefSeq]

Other Designations active breakpoint cluster region-related protein
