Gene Name ACADL

Gene Alias ACAD4, FLJ94052, LCAD

Gene Description acyl-Coenzyme A dehydrogenase, long chain

Omim ID [201460 609576](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene belongs to the acyl-CoA dehydrogenase family, which is a family of mitochondrial flavoenzymes involved in fatty acid and branched chain amino-acid metabolism . This protein is one of the four enzymes that catalyze the initial step of mitochondrial beta-oxidation of straight-chain fatty acid. Defects in this gene are the cause of long-chain acyl-CoA dehydrogenase (LCAD) deficiency, leading to nonketotic hypoglycemia. [provided by RefSeq]

Other Designations long-chain specific acyl-CoA dehydrogenase
