Protein Accession#	NP_004307.2
Gene Name	ASCL1
Gene Alias	ASH1, HASH1, MASH1, bHLHa46
Gene Description	achaete-scute complex homolog 1 (Drosophila)
Omim ID	100790 209880
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the basic helix-loop-helix (BHLH) family of transcription factors. The protein activates transcription by binding to the E box (5'-CANNTG-3'). Dimerization with other BHLH proteins is required for efficient DNA binding. This protein plays a role in the neuronal commitment and differentiation and in the generation of olfactory and autonomic neurons. Mutations in this gene may contribute to the congenital central hypoventilation syndrome (CCHS) phenotype in rare cases. [provided by RefSeq]
