Gene Info — CLPS

Entrez GeneID	1208
Gene Name	CLPS
Gene Alias	-
Gene Description	colipase, pancreatic
Omim ID	120105
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a cofactor needed by pancreatic lipase for efficient dietary lipid hydrolysis. It binds to the C-terminal, non-catalytic domain of lipase, thereby stabilizing an active conformation and considerably increasing the overall hydrophobic binding site. The gene product allows lipase to anchor noncovalently to the surface of lipid micelles, counteracting the destabilizing influence of intestinal bile salts. This cofactor is only expressed in pancreatic acinar cells, suggesting regulation of expression by tissue-specific elements. [provided by RefSeq]
