

DNAxPAb

Hard-to-Find
Antibody

TRAF3 DNAxPab

Catalog # H00007187-W01P

Size 100 ug

Applications

Western Blot (Transfected lysate)

Western Blot analysis of TRAF3 expression in transfected 293T cell line by TRAF3 DNAxPab polyclonal antibody.

Lane 1: TRAF3 transfected lysate(85.62 KDa).

Lane 2: Non-transfected lysate.

Specification

Product Description

Rabbit polyclonal antibody raised against a full-length human TRAF3 DNA using DNAx™ Immune technology.

Technology

Gene Summary

The protein encoded by this gene is a member of the TNF receptor associated factor (TRAF) protein family. TRAF proteins associate with, and mediate the signal transduction from, members of the TNF receptor (TNFR) superfamily. This protein participates in the signal transduction of CD40, a TNFR family member important for the activation of the immune response. This protein is found to be a critical component of the lymphotoxin-beta receptor (LTbetaR) signaling complex, which induces NF-kappaB activation and cell death initiated by LTbeta ligation. Epstein-Barr virus encoded latent infection membrane protein-1 (LMP1) can interact with this and several other members of the TRAF family, which may be essential for the oncogenic effects of LMP1. Three alternatively spliced transcript variants encoding two distinct isoforms have been reported. [provided by RefSeq]
