Gene Description	epithelial cell adhesion molecule
Omim ID	<u>185535</u>
Gene Ontology	<u>Hyperlink</u>
Gene Summary	This gene encodes a carcinoma-associated antigen and is a member of a family that includes at I east two type I membrane proteins. This antigen is expressed on most normal epithelial cells and gastrointestinal carcinomas and functions as a homotypic calcium-independent cell adhesion mol ecule. The antigen is being used as a target for immunotherapy treatment of human carcinomas. Mutations in this gene result in congenital tufting enteropathy. [provided by RefSeq
