

# NFKB1 (phospho S927) polyclonal antibody

Catalog # PAB25883      Size 100 ug

## Applications

### Western Blot (Cell lysate)

Western blot analysis of extracts from HT-29 cells treated with TNF-α and calyculin A using NFKB1 (phospho S927) polyclonal antibody (Cat # PAB25883).

### Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical analysis of paraffin-embedded human breast carcinoma tissue using NFKB1 (phospho S927) polyclonal antibody (Cat # PAB25883).

### Immunofluorescence

Immunofluorescence staining of methanol-fixed HeLa cells using NFKB1 (phospho S927) polyclonal antibody (Cat # PAB25883).

## Specification

### Product Description

Rabbit polyclonal antibody raised against synthetic phosphopeptide of NFKB1.

|                      |                                                                                                                                                                            |

| Gene Summary       | This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex. NFKB is a transcription regulator that is activated by various intra- and extra-cellular stimuli such as cytokines, oxidant-free radicals, ultraviolet irradiation, and bacterial or viral products. Activated NFKB translocates into the nucleus and stimulates the expression of genes involved in a wide variety of biological functions. Inappropriate activation of NFKB has been associated with a number of inflammatory diseases while persistent inhibition of NFKB leads to inappropriate immune cell development or delayed cell growth. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq] |
